PRESS RELEASE - ENERGIA CURA GATHERS NEW SUPPORT FOR THE ALL-ALASKA “ARCTIC FOX” GAS PIPELINE

FAIRBANKS: Energia Cura, an energy consulting firm and parent to the Fairbanks Pipeline Company (FPC), stated today that they are optimistic about natural gas delivery to Alaskans after recent meetings with community business leaders, State legislators, and the expressed support from Congressman Don Young’s office.

Energia Cura staff named its pipeline in recognition of the Congressman’s enthusiastic remarks that the project was small, smart and quick – The Arctic Fox Pipeline.

FPC officials presented findings to Congressman Young on December 27th regarding the natural gas pipeline project’s value to Alaskans. They also met with Mike Nizich (the Governor’s Chief of Staff) on January 6th reiterating their request for a due diligence review of the project. FPC has cautioned the Governor that delays in a natural gas pipeline will burden Alaskans, particularly Interior Alaskans, with continued unnecessary spending on high priced energy. A response from the Governor’s Office is still pending.

FPC reports that in keeping with its own transparency guidelines, it will continue to provide its documents to all interested parties upon request and will continue to post detailed updates on their website www.fairbankspipelinecompany.com. In the meantime FPC continues to meet with Alaskan leaders and others in the industry.

“We have substantiated the viability and profitability of an all-Alaska natural gas pipeline and we openly invite the public and our public officials to review our feasibility study and economic analysis,” said Alex Gajdos, FPC co-founder. “We want our public officials to see that there is a valid alternative to waiting for a big pipe. We can move gas to Alaskans now and prosper by owning the pipeline ourselves. We can get gas to Alaskans now.”
